Djizak Polytechnic Institute

Annotation: The topic of education in the modern world is very relevant. In the modern world, globality is one of the most important parameters of the existence of human society. Reflecting the processes of inter conditionality and interdependence of various components of the world community, globality expresses the ideas of the integrity of all mankind as a sociobiological entity.

Keywords: Innovation, education, modernization, educational process, it. technology.

Higher education has always been an opportunity to obtain high-quality knowledge in a particular field. Graduates were more likely to get a job, they were more valued and respected. However, over time, people began to chase not for education, but for a diploma, not for knowledge, but for a piece of paper.

Many professions can be mastered without a university. And not everyone needs a higher education, many prefer to get practical skills. And for some professions, this way is even better. For example, in order to become a programmer, graphic designer, translator, you can simply take specialized courses.

Despite this, it must be emphasized that higher education is necessary for many professions. Becoming a psychologist, teacher, scientist or doctor is simply impossible without proper education. For the development of our country, we need highly qualified specialists who know what to do. And it is these knowledge and skills that the university should give to future specialists.

One of the benefits of higher education is that it teaches how to learn. In addition to specialized knowledge, students have the opportunity to get much more. While studying, you can make many interesting acquaintances, find real friends and like-minded people who will be a good help on the way to your dream.

Today it is possible to prefer that higher education is necessary, but not for everyone. And everyone has to decide which way he wants to go. The university is a big book of possibilities, you just need to know how to use them. And if you succeed, then your student years can become one of the best in your life. All people are different by nature, we have different physical and mental abilities. Someone is attracted by science, and someone by the service sector. One person dreams of becoming a scientist, the other a hairdresser. And this is good, because the country's economy needs diverse specialists.

Each person independently chooses his life path, his profession and work. I agree with the philosopher and thinker Grigory Skovoroda, who put forward the idea of "kind of labor". It is important for each person to decide what kind of work he has a craving and inclination. That is, you need to find your vocation and, in accordance with it, choose your profile of education.

It happens that a person likes it when his work is connected with physical activity, and mental activity, on the contrary, is frightening. Of course, in this case, you should not get a university education. Or choose professions that require mobility, mobility, an active lifestyle. For example, a friend of my parents has always loved sports. He graduated and became a physical education teacher, and in parallel - a sports coach. Work in the specialty gives this man pleasure. This is an example of the right choice of future profession. After the analysis, we found that some universities have already developed a similar project, but the existing groups are filled with a small amount of information and are simply underdeveloped [4].

Thus, the relevance to receive higher, that is, university, education should be those who truly desire it [3].

Entering a university is worth it for those who are interested in long-term training in their chosen profession. In this matter, you should not act on the instructions of parents or influential acquaintances. Today, the market of educational services has developed in the world. Like any other market for goods or services, it is divided into spheres of influence, and it is regulated by the rules of the World Trade Organization. Thanks to globalization, the national standards of developed countries, and they are the main suppliers of young professionals to the world labor market, have been unified and brought into line with international standards. Diplomas and scientific degrees of their universities are mutually recognized, and academic programs are mutually credited.
