International Business. Development of entrepreneurship and business environment

Sharipov O'gabek Ziyodullaevich

Student of Tashkent Institute of Architecture and Construction

Avulov Shaxzod Erkinovich

Student of the Russian State Oil and Gas University

Abstract: This article talks about small business, private entrepreneurship, ongoing business development reforms in Uzbekistan and their statistics, international business, the development of international business and its levels, obtaining an international business level.

Key words: entrepreneurship, international business, small business, export potential, bachelor's degree, master's degree, doctoral degree, investment, accreditation.

It is necessary to create an effective system of a practical mechanism that coordinates the stable operation and further development of the market infrastructure, which will serve to more actively involve the population in entrepreneurial activities and start their own business, as well as promptly solve emerging problems at all stages of the activities of economic entities without unnecessary confusion and red tape.

The study of the development experience of the countries of the world shows that only those countries that implement comprehensive measures to support the private sector and create a favorable business environment for small businesses will achieve great success in eliminating external threats.

At the same time, the most important thing for business is the stability of the tax system. Frequent changes in legislation, including tax legislation, are the biggest obstacle to making investment decisions. Therefore, there should be no rush to introduce a new tax system. It is possible to think it through, discuss it with representatives of the business community, and only then make a decision on the implementation of this system. After the introduction of the new tax system, it is necessary to maintain its stability for a long time.

In 2017, the share of small business and private entrepreneurship in the gross domestic product was 53.3 percent or 119,301 billion soums. (In Japan - 55%, in Germany - 54%, in the USA - 52%, in Kazakhstan - 25.6%, in Russia - 20%).

78.3% of the employed population in the country are engaged in small business, while in 2000 this figure was 49.7%.

Increasing the contribution of small business to the country's economy, creating small industrial zones, improving the investment environment and competitive environment, expanding the volume of public procurement within the framework of public-private partnership with small business, strengthening mutually beneficial cooperation between large and small enterprises, innovation we can see by involving business entities in the processes.

It is also worth noting that it is important to provide financial support to successful and promising small enterprises that have sufficient export potential, but at the same time do not have enough capital for further development.

The Decree of the President of the Republic of Uzbekistan "On additional measures to ensure the rapid development of business activities, comprehensive protection of private property and qualitative improvement of the business environment", first of all, legal protection of private property aimed at further strengthening the economy, creating favorable conditions for small business and private entrepreneurship and providing all-round support, increasing the investment attractiveness of the republic, and indicating that the quality of state policy in this area has reached a new level.

When talking about international business, it can be determined that we are talking about imports and exports, not forgetting financing and investments.

All of these are areas that require, among other factors, financial support and competitiveness to be successful.

Several existing laws and regulations are responsible for shaping the terms and conditions for the international exchange of goods and services. These rules define how to determine the income of a product or capital.

In recent years, due to the global economic crisis, many companies have found that it is necessary and permissible to bet on international business if they want to survive failure. That is, to conclude contracts with foreign companies and export their products in order to increase sales and customer portfolio.

International business is the economic (entrepreneurial) activity of an international company based on the advantages of international division of labor and processes of internationalization of production and capital in order to increase profits. The importance of international business is extremely high - 90% of capital and world trade exports, including 86% of high-tech trade volume, are accounted for by business structures that are participants in this process; they manage 55% of all types and types of assets. International business is a complex contractual system of various forms, types and types of interdependent business activities with the participation of foreign partners, with clearly demarcated rights, obligations, obligations and requirements in relation to subjects; they cover all areas and sectors of the economy. The types of production and economic relations used between subjects have a strict and clearly conditional approved classification. This form of entrepreneurship is distinguished by the specificity of goals, tasks, mechanisms, structure and functions, as well as specific contractual and legal bases of business relations between partners.

There are three main types of international business degrees. These types are classified by level. A bachelor's degree is the lowest degree, a doctoral is the highest degree. Although you can earn an associate's degree in international business at some schools, these degrees are not very extensive.

- Bachelor's Degree in International Business - Bachelor's degree in International Business takes four years; three years in an accelerated program. International business programs at this level typically cover introductory topics related to basic business theory and cross-border interactions of government and business.
- Master's degree in International Business - Master's degree in International Business takes two years; accelerated programs are available through some schools. Accelerated programs

can be completed in 11-12 months. Graduate students take a more micro approach to international business; they study individual management decisions related to international business and complex topics related to international markets and cultural influences.

- Doctoral in International Business - A doctorate in international business usually takes three to five years to complete. However, the duration of the program may vary depending on your academic experience and program of choice. A PhD is the most advanced business degree that can be earned in any field, including international business.

Most people earn international business degrees from an accredited business school or college or university with a comprehensive business program. Campus and online programs (or a combination of both) can be found at many schools. Finding the best international business programs is essential if you want to pursue leadership positions or positions with top companies.
